Question 36

GH-300: Copilot CLI Features

Which command in the GitHub Copilot CLI extension is used to explain complex shell commands or flags?

A. `gh copilot suggest`

✔ **B.** `gh copilot explain`

C. `gh copilot debug`

D. `gh copilot doc`

Correct Answer: B

The `gh copilot explain` command breaks down complex command line syntax (such as intricate `find`, awk, or `tar` commands) into clear, step-by-step plain text explanations.

Option Breakdown

- **A. gh copilot suggest:** Used to generate shell command syntax based on a natural language prompt.
- **B. gh copilot explain:** Correct. Explains an existing command line string and its flags.
- **C. gh copilot debug:** Not a standard sub-command for command line explanations.
- **D. gh copilot doc:** Not a subcommand in GitHub Copilot CLI.

> 💡 **GH-300 Exam Tip**
> Remember the dual primary commands for Copilot CLI: `gh copilot suggest` (generate commands from text descriptions) and `gh copilot explain` (break down existing shell commands).
