Question 28

GH-300: Pull Request Summaries

What happens when a author generates a Pull Request summary using GitHub Copilot Enterprise on GitHub.com?

A. GitHub Copilot automatically merges the PR if no code conflicts exist.

✔ **B. Copilot analyzes the diff and generates a bulleted summary of changes in the PR description box for author review.**

C. Copilot runs static analysis security checks and signs the PR approval.

D. Copilot overwrites all existing commit messages in the repository history.

Correct Answer: B

In **GitHub Copilot Enterprise**, clicking the Copilot summary button in a pull request scans the changeset diff and produces a drafted overview containing a prose summary and bulleted list of modifications. The author can edit or review the text before saving.

Option Breakdown

- **A. Automatically merges PR:** Incorrect. Copilot never performs administrative repository actions like merging.
- **B. Generates bulleted summary of diff:** Correct. Copilot drafts a structured change summary directly in the PR description area.
- **C. Signs PR approval:** Incorrect. Approvals must come from designated human reviewers or CODEOWNERS.
- **D. Overwrites commit messages:** Incorrect. Copilot only populates the PR summary text area and never modifies Git commit history.

💡 **GH-300 Exam Tip**
Remember that PR Summaries are draft suggestions. Copilot assists human authors by creating initial descriptions, but the human developer retains ultimate responsibility for approving and submitting the PR.
