Question 59 (Matching / Drag-and-Drop)

06: Privacy, Exclusions & Safeguards

Match each GitHub Copilot capability to the minimum required subscription tier (Copilot Individual, Copilot Business, or Copilot Enterprise).

Capability / Governance Feature	Minimum Required Tier
Indexing internal Markdown docs into custom Knowledge Bases	✔ Copilot Enterprise
Organization-wide Content Exclusions, Audit Logs, and IP Indemnity	✔ Copilot Business
Automated Pull Request diff summaries on GitHub.com	✔ Copilot Enterprise
Inline IDE code completions and Chat for a personal account	✔ Copilot Individual

Tier Architecture Rationale

Copilot Individual covers personal IDE completions and chat. **Copilot Business** introduces centralized seat administration, policy enforcement (Content Exclusions, Public Code Filter), Audit Logs, and IP Indemnification. **Copilot Enterprise** adds GitHub.com-integrated intelligence including Knowledge Bases, PR summaries, and custom fine-tuned models.

> 💡 **GH-300 Exam Tip**
> If a question asks about **Knowledge Bases**, **GitHub.com PR Summaries**, or **Fine-Tuned Models**, the answer is **Copilot Enterprise**. If it asks about **Content Exclusions** or **Audit Logs**, the minimum tier is **Copilot Business**.
