Question 3

GH-300: Chat Participants

What is the role of the `@workspace` chat participant in GitHub Copilot Chat?

A. To run terminal commands and manage local shell processes.

✔ **B. To gather context about all open and indexed files in your current workspace project.**

C. To trigger GitHub Actions workflow runs on remote servers.

D. To manage billing seats across enterprise organization teams.

Correct Answer: B

The `@workspace` participant expands Copilot Chat context beyond the single active file to include workspace structure, code indexes, and relationships across project files.

Option Breakdown

- **A. Run terminal commands:** Incorrect. Handled by the `@terminal` participant.
- **B. Gather context across project files:** Correct. `@workspace` allows Copilot to answer architectural and multi-file project questions.
- **C. Trigger GitHub Actions:** Incorrect. Copilot Chat participants do not directly dispatch workflows.
- **D. Manage billing seats:** Incorrect. Seat management is handled strictly through GitHub Enterprise organization settings.

💡 **GH-300 Exam Tip**

Know key Chat Participants for VS Code / Visual Studio: `@workspace` (entire codebase context), `@vscode` / `@editor` (IDE commands/settings), and `@terminal` (CLI context).
