Question 26

GH-300: Mobile Integration

What capabilities does GitHub Copilot Chat provide within the official GitHub Mobile app for enterprise users?

A. Full inline code completion inside mobile text editors.

✔ **B. Summarizing issues/pull requests, explaining code, and answering repository questions on the go.**

C. Executing background CI/CD deployment commands via voice chat.

D. Editing and committing binary files directly to main branches.

Correct Answer: B

GitHub Copilot Chat in GitHub Mobile allows developers to query repository details, request explanations for pull request diffs or issues, and ask natural language coding questions directly from mobile devices.

Option Breakdown

- **A. Full inline code completion:** Incorrect. GitHub Mobile does not serve as a primary IDE for real-time typing autocomplete.
- **B. Summarizing PRs/issues and answering questions:** Correct. Mobile Copilot focuses on conversational code understanding and review support.
- **C. Voice-command CI/CD deployments:** Incorrect. Copilot Mobile Chat does not trigger pipeline deployments directly.
- **D. Editing and committing binary files:** Incorrect. Binary file editing is out of scope for Copilot Mobile.

💡 **GH-300 Exam Tip**
Copilot Chat on GitHub Mobile relies on the same permissions and enterprise access boundaries established for GitHub.com web chat.
