Question 15

GH-300: Application Modernization

In what way can GitHub Copilot and GitHub Copilot Chat aid developers in modernizing applications?

A. GitHub Copilot can directly convert legacy applications into cloud-native architectures.

✔ **B. GitHub Copilot can suggest modern programming patterns based on your code.**

C. GitHub Copilot can create and deploy full-stack applications based on a single query.

D. GitHub Copilot can refactor applications to align with upcoming standards.

Correct Answer: B

During app modernization, Copilot assists developers by analyzing legacy snippets and suggesting updated framework APIs, modern asynchronous patterns, or cleaner structural implementations.

Option Breakdown

- **A. Directly convert legacy apps:** Incorrect. Architecture transformations require major human design decisions beyond LLM scope.
- **B. Suggest modern programming patterns:** Correct. Copilot assists modernization by proposing updated syntactic structures and newer APIs.
- **C. Create and deploy from single query:** Incorrect. Copilot is an assistant, not an end-to-end full-stack app generator and deployment pipeline.
- **D. Align with upcoming standards:** Incorrect. Copilot generates patterns based on past/current training data, not unknown future standards.

💡 **GH-300 Exam Tip**

Copilot acts as an assistant that provides suggestions and code recommendations. It never takes over end-to-end operational duties like full app architecture conversion or automated cloud deployment.
