Question 51

02: Use GitHub Copilot Features

What capability does GitHub Models offer developers on GitHub.com?

A. Automatically deploying Kubernetes clusters for AI workloads.

✔ **B. Allowing developers to experiment, compare, and test leading AI models (e.g., Meta Llama, OpenAI, Phi) in an interactive web playground.**

C. Replacing git commit history with model embeddings.

D. Disabling seat licenses for enterprise users.

Correct Answer: B

GitHub Models provides an interactive web-based playground on GitHub.com that lets developers experiment with, evaluate, and prototype against various industry AI models prior to integrating them into applications.

Option Breakdown

- **A. Deploying Kubernetes clusters:** Incorrect. GitHub Models focuses on model evaluation and API prototyping, not infrastructure provisioning.
- **B. Interactive web playground for comparing models:** Correct. Provides direct access to test diverse LLMs side by side.
- **C. Replacing git commit history:** Incorrect. Git commit management remains completely separate from model testing features.
- **D. Disabling seat licenses:** Incorrect. GitHub Models does not alter license billing or seat assignments.

💡 **GH-300 Exam Tip**

GitHub Models brings prompt prototyping into the GitHub ecosystem, allowing developers to test model parameters (temperature, top_p) and export sample code directly to SDKs.
