Question 18

GH-300: Data Handling & Privacy

How long does GitHub retain telemetry data (such as Prompts, Suggestions, and User Engagement data) for GitHub Copilot Business and Enterprise? (Choose two.)

✔ **A. Prompts and Suggestions: Not retained.**

B. Prompts and Suggestions: Retained for 28 days for quality assurance.

C. User Engagement Data: Kept for 90 days.

✔ **D. User Engagement Data: Kept for 28 days (aggregate operational telemetry).**

Correct Answer: A and D

For enterprise tiers (Copilot Business and Copilot Enterprise), **Prompts and Suggestions are discarded immediately** following response generation and are zero-retained. Operational metric data (User Engagement Data like completion acceptance counts) is retained pseudonymously for 28 days to measure platform usage.

Option Breakdown

- **A. Prompts & Suggestions Not Retained:** Correct. Enterprise privacy commitments guarantee zero snippet storage on GitHub servers.
- **B. Retained for 28 days (snippets):** Incorrect. Code snippet retention for 28 days only applies to Individual plans where telemetry is opted-in.
- **C. User Engagement Kept for 90 days:** Incorrect. Standard operational telemetry window is 28 days, not 90 days.
- **D. User Engagement Kept for 28 days:** Correct. Aggregate usage statistics are retained for 28 days to populate admin analytics dashboards.

💡 **GH-300 Exam Tip**

Distinguish clearly between *Individual* vs *Business/Enterprise* plans. Individual plans may retain snippets for 28 days if opted-in; Business and Enterprise plans **never** retain prompts or code suggestions.
