Question 7

GH-300: Knowledge Bases

What is the primary function of Knowledge Bases in GitHub Copilot Enterprise?

A. Automatically training fine-tuned models on private codebases every 24 hours.

✔ **B. Grouping organization documentation across repositories to ground Copilot Chat answers.**

C. Exporting prompt telemetry to external security dashboards.

D. Restricting IDE access to authorized organizational IP ranges.

Correct Answer: B

Knowledge Bases allow GitHub Copilot Enterprise administrators to index collection sets of Markdown/text documentation across multiple repositories so developers can query enterprise-wide knowledge directly through GitHub Copilot Chat.

Option Breakdown

- **A. Automatically training models daily:** Incorrect. Knowledge Bases use Retrieval-Augmented Generation (RAG), not model retraining.
- **B. Grouping documentation across repos:** Correct. Provides structured RAG context across enterprise repositories for Chat queries.
- **C. Exporting prompt telemetry:** Incorrect. Knowledge Bases manage context indexing, not audit logging exports.
- **D. Restricting IP ranges:** Incorrect. Network access control is handled by GitHub Enterprise security settings, not Copilot Knowledge Bases.

💡 **GH-300 Exam Tip**

Knowledge Bases rely on **Retrieval-Augmented Generation (RAG)** to query documentation repositories on GitHub.com without modifying base model weights.
