Question 22

GH-300: Seat & Access Management

How can an organization administrator grant GitHub Copilot access to developers in an enterprise setup?

A. By sharing a global license key file in the organization repository.

✔ **B. By assigning Copilot licenses to specific members or teams within the organization settings.**

C. By having each developer enter their personal credit card for reimbursement.

D. By adding developers to a public repository committers list.

Correct Answer: B

In GitHub Copilot Business and Enterprise, license seats are centrally assigned by organization or enterprise owners to individual GitHub usernames or whole GitHub teams via the Organization Billing/Copilot management UI.

Option Breakdown

- **A. License key file:** Incorrect. GitHub Copilot uses cloud seat assignment via GitHub handles, not static license files.
- **B. Assign licenses to members/teams:** Correct. Seat allocation is managed dynamically through organization member/team roles.
- **C. Developer personal credit cards:** Incorrect. Enterprise licenses are billed centrally to the organization account or Azure subscription.
- **D. Add to public committers list:** Incorrect. Access control is granted via org membership and seat assignment, not commit rights.

💡 **GH-300 Exam Tip**
Admin options for seat management: **Enable for all members**, **Enable for selected teams/users**, or **Disabled**. Seats are billed monthly per assigned user.
