Question 21

GH-300: IP Protection & Licensing

What administrative policy setting must be set to 'Blocked' to qualify for GitHub's IP Indemnification guarantee when using GitHub Copilot?

A. Telemetry data collection.

B. Public repository search access.

✔ **C. Suggestions matching public code.**

D. Open-source library autocomplete.

Correct Answer: C

GitHub provides legal protection (IP Indemnification) against copyright claims on Copilot-generated code provided the organization enforces the **"Suggestions matching public code" filter set to Blocked**.

Option Breakdown

- **A. Telemetry data collection:** Telemetry opt-outs govern data privacy, not IP infringement indemnity eligibility.
- **B. Public repository search access:** Refers to standard GitHub web search, not Copilot code completion filtering.
- **C. Suggestions matching public code (Blocked):** Correct. Blocking verbatim matches of ~150+ characters of public code is required for IP indemnity.
- **D. Open-source library autocomplete:** Not a standard configurable policy setting name in GitHub settings.

💡 **GH-300 Exam Tip**

For indemnity protection on GH-300: Setting *Suggestions matching public code* to **Blocked** prevents verbatim code duplication and activates GitHub's legal defense commitment.
