Question 40

06: Privacy & Content Exclusions

After an administrator updates a Content Exclusion policy in GitHub settings, how quickly do the exclusion rules propagate to open developer IDE sessions?

A. Immediately without any delay.

✔ **B. Within 30 minutes, or upon restarting the IDE / re-authenticating.**

C. Exactly 24 hours later during nightly server sync.

D. Only after developers push a new git commit.

Correct Answer: B

Content Exclusion settings propagate to active client IDE connections within **up to 30 minutes** due to client-side caching. Reloading the editor window or restarting the IDE applies the updated rules immediately.

Option Breakdown

- **A. Immediately without delay:** Incorrect. Active IDE extension sessions cache settings for up to 30 minutes.
- **B. Within 30 mins or IDE restart:** Correct. Standard propagation window across connected clients.
- **C. Exactly 24 hours:** Incorrect. Policy caching does not take a full day.
- **D. Only after git commit:** Incorrect. Content Exclusion works at the editor policy level, independent of Git commit events.

💡 **GH-300 Exam Tip**

For the exam: Content Exclusion updates take up to **30 minutes** to automatically propagate to connected IDEs unless the developer reloads their editor window.
