Question 13

GH-300: Copilot Enterprise PRs

How does GitHub Copilot Enterprise assist in code reviews during the pull request process? (Select two.)

A. It automatically merges pull requests after an automated review.

✔ **B. It generates a prose summary and a bulleted list of key changes for pull requests.**

C. It can validate the accuracy of the changes in the pull request.

✔ **D. It can answer questions about the changeset of the pull request.**

Correct Answer: B and D

GitHub Copilot Enterprise integrates directly into the Pull Request interface on GitHub.com to generate natural-language descriptions of code diffs (PR summaries) and enables developers to ask questions directly about PR changes via Copilot Chat.

Option Breakdown

- **A. Automatically merges PRs:** Incorrect. Copilot never performs administrative repository actions like merging.
- **B. Generates prose summary and bullet points:** Correct. Copilot summarizes PR diffs into human-readable bullet points.
- **C. Validates accuracy of changes:** Incorrect. Formal accuracy/correctness requires tests, CI/CD, and human review.
- **D. Answers questions about changeset:** Correct. Copilot Chat on GitHub.com provides contextual answers about specific PR diffs.

💡 **GH-300 Exam Tip**

PR Summaries and PR Chat are signature features of **GitHub Copilot Enterprise** on GitHub.com. They are not available in Copilot Individual or Business IDE plugins.
