Question 39

05: Improve Developer Productivity

Which slash command in GitHub Copilot Chat generates standard documentation comments (docstrings) for highlighted functions?

A. `/explain`

✔ **B.** `/doc`

C. `/fix`

D. `/tests`

Correct Answer: B

The `/doc` slash command generates documentation comments (JSDoc, PyDoc, Doxygen) tailored to the active programming language and selected function parameters.

Option Breakdown

- **A. /explain:** Explains how selected code operates in natural language.
- **B. /doc:** Correct. Synthesizes inline documentation comments and function docstrings.
- **C. /fix:** Analyzes errors and proposes bug fixes.
- **D. /tests:** Generates unit test suites.

💡 **GH-300 Exam Tip**
`/doc` matches the target language's canonical documentation format automatically (e.g., JSDoc for JavaScript/TypeScript, triple-quote docstrings for Python).
