Question 29

GH-300: Billing & Seat Management

When an organization unassigns a GitHub Copilot Business seat from a user mid-billing cycle, how is billing handled?

A. The seat remains active until the end of the year without any adjustment.

✔ **B. The organization is billed prorated for the number of days the seat was assigned during that billing cycle.**

C. GitHub issues an immediate cash refund to the user's personal payment method.

D. The unassigned seat is permanently deleted from the enterprise organization account.

Correct Answer: B

GitHub Copilot Business and Enterprise licenses utilize **prorated billing**. When a seat is assigned or revoked mid-cycle, the enterprise organization is billed proportionally for the precise number of active days during that monthly billing period.

Option Breakdown

- **A. Active until end of year:** Incorrect. Copilot seats are billed on a flexible monthly subscription cycle.
- **B. Billed prorated for active days:** Correct. Billing calculates daily usage for newly assigned or cancelled seats.
- **C. Cash refund to personal payment:** Incorrect. Enterprise licenses are handled strictly through organization invoicing.
- **D. Seat permanently deleted:** Incorrect. Administrators can reassign unassigned seats to other organization members at any time.

💡 **GH-300 Exam Tip**
Prorated daily billing allows organization admins to dynamically add or revoke developer seats as project needs scale without paying full monthly rates for partial seat usage.
