Question 60

02: Use GitHub Copilot Features

What is the primary purpose of Knowledge Bases in GitHub Copilot Enterprise?

A. To store encrypted API secrets and database credentials for CI/CD runners.

✔ **B. To allow organization admins to group Markdown documentation across one or more repositories so developers can query internal guidelines and architecture docs in Copilot Chat.**

C. To automatically generate billing invoices for Copilot seat assignments.

D. To block open-source dependencies from being imported into private repositories.

Correct Answer: B

Knowledge Bases in GitHub Copilot Enterprise aggregate Markdown documentation files across multiple repositories into searchable collections. Developers can select a Knowledge Base in Copilot Chat (on GitHub.com or inside supported IDEs) to get answers grounded in internal engineering standards, runbooks, and design docs.

Option Breakdown

- **A. Store encrypted API secrets:** Incorrect. Secrets management is handled by GitHub Actions Secrets, not Knowledge Bases.
- **B. Group Markdown docs across repos for grounded Chat queries:** Correct. Enables Retrieval-Augmented Generation (RAG) over internal Markdown documentation.
- **C. Generate billing invoices:** Incorrect. Billing is managed in Enterprise/Organization billing settings.
- **D. Block open-source dependencies:** Incorrect. Dependency governance is handled via Dependency Review and security policies.

💡 **GH-300 Exam Tip**

Knowledge Bases index **Markdown files** across selected repositories and respect repository access permissions—users only receive answers from repositories they already have read access to.
