Question 23

GH-300: Custom Instructions

What is the designated file location for adding custom repository-wide instructions for GitHub Copilot Chat?

A. `.github/copilot-config.json`

✔ **B.** `.github/copilot-instructions.md`

C. `.copilot/settings.yml`

D. `README.md`

Correct Answer: B

GitHub Copilot Chat automatically checks for a file named `.github/copilot-instructions.md` at the root of a repository. Content placed in this file is automatically prepended as context to Copilot Chat requests to enforce repository coding styles and rules.

Option Breakdown

- **A. .github/copilot-config.json:** Incorrect. Settings are formatted in Markdown, not JSON.
- **B. .github/copilot-instructions.md:** Correct. Standardized path used by Copilot to automatically load repository-specific instructions.
- **C. .copilot/settings.yml:** Incorrect. Copilot does not parse YAML files for custom chat instructions.
- **D. README.md:** Incorrect. README files serve human documentation needs and are not automatically appended as system instructions.

💡 **GH-300 Exam Tip**
The exact filename and path tested on the GH-300 exam is `.github/copilot-instructions.md`. Use this file to define project constraints, preferred testing frameworks, and style guidelines.
