Question 9

GH-300: Privacy & Data Security

How does GitHub Copilot for Business handle user code snippets regarding AI model training?

A. Snippets are stored indefinitely and used to train future foundation models.

✔ **B. Snippets are discarded immediately after generating suggestions and are NOT used to train public models.**

C. Snippets are published to GitHub's public telemetry database.

D. Snippets are encrypted and stored for 90 days before training public models.

Correct Answer: B

Under GitHub Copilot for Business and Copilot Enterprise, user code snippets (prompts and completions) are processed in-memory to deliver recommendations and are discarded immediately afterward. They are never retained or used to train base AI models.

Option Breakdown

- **A. Stored indefinitely for training:** Incorrect. Applies to free/individual tiers only if telemetry collection is explicitly enabled by the user.
- **B. Discarded immediately, NOT used for training:** Correct. Enterprise and Business tier agreements guarantee zero retention and zero model training on customer code.
- **C. Published to public database:** Incorrect. Private code is never published or made public.
- **D. Stored for 90 days before training:** Incorrect. Retaining customer code for model training does not occur on paid Business/Enterprise plans.

💡 **GH-300 Exam Tip**

A core exam concept: **Copilot Business & Enterprise subscriptions guarantee that code snippets are never retained or used for public model training**.
